

1. What is a Data Warehouse primarily used for?
 - a) Transaction Processing
 - b) Data Analysis and Reporting** ✓
 - c) Real-time Processing
 - d) Operating System Management
2. Which of the following is NOT a characteristic of a Data Warehouse?
 - a) **Subject-Oriented** ✗
 - c) Volatile** ✓
 - b) Integrated
 - d) Non-Volatile
3. The process of extracting, transforming, and loading data into a Data Warehouse is known as:
 - a) OLTP
 - b) ETL** ✓
 - c) OLAP
 - d) Data Mining
4. What is the primary function of OLAP in a Data Warehouse?
 - a) Data Entry
 - b) Complex Query Processing** ✓
 - c) Real-time Updates
 - d) Network Management
5. A Data Mart is:
 - a) A smaller subset of a Data Warehouse** ✓
 - b) A real-time transactional database
 - c) A primary key in a relational database
 - d) A temporary storage for ETL
6. In a star schema, the central table is called:
 - a) Dimension Table
 - b) Fact Table** ✓
 - c) Lookup Table
 - d) Index Table
7. The term 'Snowflake Schema' refers to:
 - a) A fully normalized data warehouse schema** ✓
 - b) A schema with no redundancy
 - c) A schema with only one table
 - d) A flat-file database
8. Which of the following is an advantage of a Data Warehouse?
 - a) Reduces Query Performance
 - b) Improves Decision Making** ✓
 - c) Increases Data Redundancy
 - d) Increases Data Inconsistency
9. What is the main purpose of metadata in a Data Warehouse?
 - a) To store actual data
 - b) To define the structure of the Data Warehouse

c) To execute ETL processes

d) To manage transaction logs ✗

Correct answer: b) To define the structure of the Data Warehouse

10. Data Granularity in a Data Warehouse refers to:

a) The level of detail in the data ✓

b) The size of the database

c) The speed of queries

d) The type of storage used

11. Which of the following is a Data Warehouse architecture type?

a) Two-tier

b) Three-tier

c) Both a and b ✓

d) None of the above

12. The role of a Staging Area in a Data Warehouse is to:

a) Store temporary data before loading into the warehouse ✓

b) Act as the final storage layer

c) Process real-time transactions

d) Act as an OLTP database

13. Which of the following tools is used for Data Warehousing?

a) Tableau

b) Informatica ✗

Correct answer: d) All of the above

c) Power BI

d) All of the above

14. What is the main purpose of slowly changing dimensions (SCDs)?

a) To handle changes in data over time

b) To speed up ETL processes

c) To remove duplicate records

d) To optimize query performance ✗

Correct answer: a) To handle changes in data over time

15. Which of the following is an example of a Fact Table measure?

a) Customer Name

b) Product Category ✗

Correct answer: c) Total Sales Amount

c) Total Sales Amount

d) Order Date

16. Data Cleansing is an important step in Data Warehousing to:

a) Improve data quality ✓

b) Increase data redundancy

c) Eliminate database security risks

d) Improve network performance

17. Which of the following is NOT a data warehouse model?

a) Virtual Data Warehouse

b) Enterprise Data Warehouse

c) Operational Data Store

d) Data Mining Model ✓

18. The primary goal of Business Intelligence in a Data Warehouse is:

a) Data Entry

b) Transaction Processing ✗

Correct answer: c) Data Analysis and Decision Making

c) Data Analysis and Decision Making

d) Network Security

19. In a Data Warehouse, historical data is mainly used for:

a) Real-time Transaction Processing

b) Trend Analysis and Forecasting ✓

c) System Recovery

d) Reducing Data Redundancy

20. What is a Conformed Dimension in Data Warehousing?

a) A dimension used in multiple fact tables ✓

b) A dimension with only one attribute

c) A dimension that does not store data

d) A temporary lookup table

21. What is Informatica PowerCenter primarily used for?

a) Transaction Processing

b) ETL (Extract, Transform, Load) ✓

c) Web Development

d) Operating System Management

22. Which of the following is NOT a component of Informatica PowerCenter?

a) Repository Manager

b) Workflow Manager

c) Data Explorer ✗

Correct answer: d) Designer

23. In Informatica, which component is responsible for executing workflows?

a) Workflow Manager

b) Workflow Monitor ✗

Correct answer: c) Integration Service

c) Integration Service

d) Repository Service

24. What is the purpose of a Mapping in Informatica?

a) To define how data moves from source to target ✓

b) To monitor job execution

c) To manage metadata

d) To generate reports

25. What is a session in Informatica?

a) A tool for designing mappings

b) A command-line tool

c) A task that loads data from source to target ✓

d) A data transformation technique

26. Which type of transformation in Informatica does NOT change the number of rows passing through it?

a) Filter Transformation

b) Aggregator Transformation

- c) **Expression Transformation** ✓
d) Router Transformation ✗
27. Which transformation is used to remove duplicate records?
a) Joiner Transformation
b) Aggregator Transformation
c) **Sorter Transformation** ✓
d) Router Transformation
28. What is the primary purpose of the Lookup Transformation?
a) To perform calculations on numeric data
b) **To fetch data from a relational table based on a condition** ✓
c) To remove duplicate records
d) To load data in parallel
29. What is a Repository in Informatica?
a) A storage location for metadata
b) **A transformation used for sorting data** ✗
Correct answer: a) A storage location for metadata
30. What does the term "Pushdown Optimization" refer to in Informatica?
a) A method to improve UI performance
b) A technique to execute transformations at the database level
c) **A way to clean data before processing** ✗
Correct answer: b) A technique to execute transformations at the database level
31. Which of the following is a reusable object in Informatica?
a) Mapping
b) Session
c) Transformation
d) **All of the above** ✓
32. What type of join does the Joiner Transformation perform by default?
a) Inner Join
b) Left Outer Join
c) Right Outer Join
d) **Full Outer Join** ✗
Correct answer: a) Inner Join
33. What does the Integration Service do in Informatica?
a) Manages the repository database ✗
Correct answer: b) Executes workflows and sessions
b) Executes workflows and sessions
c) Monitors network traffic
d) Controls user authentication
34. What is the purpose of a Router Transformation?
a) **To split data into multiple groups based on conditions** ✓
b) To aggregate numeric values
c) To perform complex calculations
d) To merge multiple data sources
35. What is the difference between Normal and Bulk mode in Informatica?
a) **Normal mode loads data faster than Bulk mode** ✗
Correct answer: b) Bulk mode processes large volumes of data efficiently
36. Which type of file does Informatica use for storing session logs?
a) .txt
b) .xml

- c) .log ✓
d) .dat
37. What is the purpose of the Workflow Monitor?
a) To design and execute mappings
b) To monitor the execution of workflows and sessions ✓
c) To create and manage repositories
d) To integrate data sources
38. What is a surrogate key in Informatica?
a) A natural key from the source system
b) A unique identifier generated for a record
c) A primary key in a relational database
d) A data type used in expression transformation ✗
Correct answer: b) A unique identifier generated for a record
39. Which transformation is used to rank records based on a specific column?
a) Rank Transformation ✓
b) Filter Transformation
c) Sorter Transformation
d) Aggregator Transformation
40. What does "persistent cache" mean in Lookup Transformation?
a) The cache is stored temporarily during execution
b) The cache is deleted after every session
c) The cache is stored and reused for multiple sessions ✓
d) The cache does not store any data
41. What is Tableau primarily used for?
a) Web Development
b) Data Visualization ✓
c) Database Management
d) ETL Processing
42. Which of the following is NOT a type of chart in Tableau?
a) Bar Chart
b) Gantt Chart
c) Pie Chart
d) Pyramid Chart ✓
43. What is the role of a "Measure" in Tableau?
a) It represents categorical data
b) It is a numerical value that can be aggregated ✓
c) It stores metadata about a data source
d) It is used to filter data
44. What does a "Dimension" in Tableau represent?
a) Numerical data that can be aggregated
b) A unique identifier for each record
c) Categorical data such as names and dates ✓
d) A type of calculated field
45. In Tableau, which type of join includes only matching records from both tables?
a) Inner Join ✓
b) Left Join
c) Right Join
d) Full Outer Join
46. Which of the following is a valid data source for Tableau?
a) Excel
b) SQL Server

- c) Google Sheets
d) All of the above ✓
47. What is a Tableau Dashboard?
a) A single worksheet
b) A collection of multiple visualizations and insights ✓
c) A report generated from a database query
d) A summary of metadata from a data source
48. What is the purpose of a calculated field in Tableau?
a) To modify database schemas
b) To create new fields using formulas ✓
c) To change the structure of a dataset
d) To remove null values from data
49. In Tableau, what does the "Dual-Axis" feature do?
a) Allows two measures to be plotted on the same graph
b) Merges two different data sources ✗
Correct answer: a) Allows two measures to be plotted on the same graph
c) Splits a dataset into multiple parts
d) Removes duplicate records
50. What is the difference between a "Live Connection" and an "Extract" in Tableau?
a) Live Connection fetches data in real-time, Extract stores a snapshot of data
b) Extract loads data faster than Live Connection
c) Live Connection allows real-time updates, Extract does not
d) All of the above ✓
51. Which of the following is a type of filter in Tableau?
a) Dimension Filter
b) Measure Filter
c) Context Filter
d) All of the above ✓
52. What is the "LOD Expression" in Tableau used for?
a) To format text in dashboards
b) To perform calculations at different levels of detail ✓
c) To define relationships between tables
d) To join multiple data sources
53. Which file extension represents a Tableau Workbook?
a) .twb ✓
b) .tde
c) .twbx
d) Both a and c ✗
54. What does "Blending" in Tableau mean?
a) Combining multiple data sources in a single view ✓
b) Merging two databases
c) Removing duplicate records
d) Applying conditional formatting
55. What is a "Heat Map" used for in Tableau?
a) To represent data density using colors
b) To track temperature data ✗
Correct answer: a) To represent data density using colors
c) To highlight outliers in a dataset
d) To compare different data sources
56. Which feature in Tableau allows users to dynamically change filters or views?
a) Data Extracts

b) Parameters ✓

c) Blending

d) Dual-Axis

57. What is the use of "Story Points" in Tableau?

a) To create interactive presentations with visual insights ✓

b) To add annotations to charts

c) To track changes in data over time

d) To filter datasets dynamically

58. Which of the following allows Tableau to connect to multiple data sources?

a) Data Joins

b) Data Blending

c) Relationship Model

d) All of the above ✓

59. What is the purpose of a "Bullet Chart" in Tableau?

a) To visualize progress toward a goal ✓

b) To compare multiple categories

c) To track changes in a dataset

d) To plot time series data

60. What is the difference between a "Worksheet" and a "Dashboard" in Tableau?

a) A Worksheet contains a single visualization, while a Dashboard combines multiple ✓

b) A Dashboard is used for filtering data, while a Worksheet is not

c) A Worksheet is an interactive panel, while a Dashboard is static

d) There is no difference
