

Data Warehouse + Informatica + Tableau MCQ Questions

1. Data Warehousing is:
 - a) A process of cleaning data
 - b) **A subject-oriented, integrated, time-variant, and non-volatile collection of data** ✓
 - c) A type of database management system
 - d) None of the above
2. The integration property of data warehousing means:
 - a) Data comes from one source
 - b) **Data from different sources is combined into a consistent format** ✓
 - c) Data is stored in one table
 - d) None of the above
3. ETL stands for:
 - a) Extract, Transfer, Load
 - b) **Extract, Transform, Load** ✓
 - c) Extract, Table, Load
 - d) Evaluate, Transform, Load
4. The main purpose of a data warehouse is:
 - a) **To support decision-making and business intelligence** ✓
 - b) To store transactional data
 - c) To replace operational databases
 - d) None of the above
5. A Data Mart is:
 - a) A large data warehouse
 - b) **A subset of a data warehouse focused on a specific business area** ✓
 - c) A type of OLTP system
 - d) Used for storing historical records only
6. Drill-down analysis in data warehousing helps in:
 - a) Summarizing data
 - b) **Viewing detailed data from summary levels** ✓
 - c) Deleting duplicate records
 - d) Improving storage capacity
7. A data warehouse consists of:
 - a) **Fact and Dimension tables** ✓
 - b) Only transactional data
 - c) Only summary data
 - d) Only normalized tables
8. Snowflake Schema is:
 - a) A denormalized schema
 - b) **A normalized form of a star schema** ✓
 - c) A type of data modeling technique
 - d) A transactional model

9. A Fact Table primarily contains:
- a) Descriptive information
 - b) **Numeric values that represent measurements** ✓
 - c) Only textual data
 - d) Only primary keys
10. Slowly Changing Dimensions (SCDs) handle:
- a) Real-time data updates
 - b) **Historical data changes over time** ✓
 - c) OLTP transactions
 - d) Data deletion policies
11. Which tool is commonly used for ETL processes?
- a) **Informatica** ✓
 - b) Power BI
 - c) Tableau
 - d) Excel
12. OLAP stands for:
- a) **Online Analytical Processing** ✓
 - b) Online Automated Processing
 - c) Open Logical Analytical Process
 - d) Operational Layer for Analytical Processing
13. Roll-up operation in OLAP means:
- a) Moving from detailed data to summary data
 - b) **Aggregating data to higher levels** ✓
 - c) Drilling down into detailed data
 - d) None of the above
14. Data Warehousing helps in:
- a) Real-time transaction processing
 - b) **Business Intelligence and Decision Support** ✓
 - c) Data normalization
 - d) None of the above
15. Data Mining is used for:
- a) ETL processes
 - b) Creating reports
 - c) **Extracting patterns and trends from large datasets** ✓
 - d) Data validation
16. Which cloud data warehouse is widely used?
- a) Oracle Database
 - b) **Google BigQuery** ✓
 - c) MySQL
 - d) Excel
17. The primary key in a dimension table is:
- a) A foreign key
 - b) **A unique identifier for dimension records** ✓

- c) Always a numeric value
 - d) A composite key
18. Data Governance ensures:
- a) **Data accuracy, consistency, and security** ✓
 - b) Faster processing speeds
 - c) Improved ETL performance
 - d) Cloud migration
19. Indexing in data warehousing improves:
- a) **Query performance and retrieval speed** ✓
 - b) Data cleaning
 - c) Data redundancy
 - d) Transaction processing
20. A data warehouse is typically:
- a) **A relational database optimized for analytical queries** ✓
 - b) A real-time transaction processing system
 - c) A temporary storage space
 - d) A document database
21. Informatica is mainly used for:
- a) Data storage
 - b) **ETL (Extract, Transform, Load)** ✓
 - c) Cloud computing
 - d) Database administration
22. The component used to create workflows in Informatica is:
- a) Repository Manager
 - b) **Workflow Manager** ✓
 - c) Workflow Monitor
 - d) Transformation Designer
23. ETL stands for:
- a) Extract, Transfer, Load
 - b) Extract, Table, Load
 - c) **Extract, Transform, Load** ✓
 - d) Evaluate, Transform, Load
24. PowerCenter Designer is used for:
- a) Workflow execution
 - b) **Creating ETL mappings** ✓
 - c) Monitoring tasks
 - d) Creating dashboards
25. A Router transformation is:
- a) A passive transformation
 - b) A type of aggregator
 - c) **An active transformation that routes data into multiple groups** ✓
 - d) A type of lookup transformation
26. A Filter transformation is:
- a) Active
 - b) Passive

- c) **A transformation that restricts records based on a condition** ✓
 - d) None of the above
27. Metadata in Informatica is:
- a) **Data about data, including structure and processing rules** ✓
 - b) The actual data
 - c) The output of an ETL process
 - d) A type of transformation
28. A passive transformation:
- a) Modifies the number of rows
 - b) Alters the data structure
 - c) **Does not change the number of rows in the data flow** ✓
 - d) None of the above
29. A Lookup transformation is used to:
- a) Modify data values
 - b) **Retrieve data from another table for reference** ✓
 - c) Perform calculations
 - d) Apply filters
30. An active transformation:
- a) **Changes the number of rows in the output** ✓
 - b) Does not modify the data
 - c) Only performs calculations
 - d) Works only with real-time data
31. The purpose of a Session in Informatica is:
- a) To create mappings
 - b) **To execute an ETL process for data transformation** ✓
 - c) To design reports
 - d) To monitor workflows
32. A Joiner transformation is used to:
- a) Filter data
 - b) **Combine data from multiple sources** ✓
 - c) Perform aggregations
 - d) Create metadata
33. A Filter transformation:
- a) **Removes records that do not meet a condition** ✓
 - b) Modifies data values
 - c) Joins two tables
 - d) Performs calculations
34. Which of the following is NOT an active transformation?
- a) Router
 - b) Filter
 - c) Aggregator
 - d) **Lookup** ✓
35. Partitioning in Informatica is used for:
- a) **Dividing data for parallel processing to improve performance** ✓
 - b) Filtering records
 - c) Creating metadata
 - d) Joining tables
36. The Lookup Cache is used to:
- a) Filter data

- b) **Improve performance by storing lookup data in memory** ✓
 - c) Execute workflows
 - d) Validate sessions
37. Workflow Monitor is used for:
- a) **Tracking and managing the execution of workflows** ✓
 - b) Creating mappings
 - c) Modifying metadata
 - d) Designing dashboards
38. Normalizer transformation is used for:
- a) **Splitting column data into multiple rows** ✓
 - b) Filtering records
 - c) Aggregating data
 - d) None of the above
39. Incremental aggregation is:
- a) Real-time data processing
 - b) A type of lookup operation
 - c) **Processing only new or changed data instead of the entire dataset** ✓
 - d) Data partitioning
40. Target Definition in Informatica refers to:
- a) The primary key of a table
 - b) **Defining the structure of the destination table where data will be loaded** ✓
 - c) The source table
 - d) The ETL process
41. Tableau is primarily used for:
- a) Data storage
 - b) **Data visualization and business intelligence** ✓
 - c) Transaction processing
 - d) ETL processes
42. A dashboard in Tableau is:
- a) A collection of unrelated reports
 - b) **A collection of visualizations and insights on one screen** ✓
 - c) A data warehouse
 - d) A type of transformation
43. Which of the following charts is best for showing trends over time?
- a) **Line Chart** ✓
 - b) Pie Chart
 - c) Histogram
 - d) Scatter Plot
44. Which data connection type allows real-time updates in Tableau?
- a) Extract
 - b) Static
 - c) File-based
 - d) **Live Connection** ✓
45. A Measure in Tableau represents:
- a) **Quantitative data that can be aggregated** ✓
 - b) Categorical data
 - c) A type of filter
 - d) A worksheet

46. A Dimension in Tableau represents:
- a) **Qualitative data used for slicing and dicing the data** ✓
 - b) Numerical data only
 - c) Aggregated values
 - d) Calculated fields
47. A Calculated Field in Tableau is used for:
- a) **Creating new data fields using formulas** ✓
 - b) Filtering data
 - c) Connecting databases
 - d) Creating dashboards
48. Which file type stores Tableau dashboards and worksheets?
- a) .xls
 - b) .csv
 - c) **.twb or .twbx** ✓
 - d) .json
49. Filters in Tableau are used to:
- a) Modify data source connections
 - b) **Restrict data displayed in visualizations** ✓
 - c) Format dashboards
 - d) Change database schemas
50. Blending in Tableau is used for:
- a) **Combining data from different sources based on a common field** ✓
 - b) Filtering data
 - c) Formatting visualizations
 - d) Creating dashboards
51. The primary use of a Hierarchy in Tableau is:
- a) **To drill down from summarized data to detailed data** ✓
 - b) To blend multiple data sources
 - c) To sort values in ascending order
 - d) To apply filters
52. The Pages shelf in Tableau helps in:
- a) Data blending
 - b) **Creating animations or step-wise visualization transitions** ✓
 - c) Filtering worksheets
 - d) Aggregating data
53. A Heat Map is useful for:
- a) Creating tables
 - b) **Visualizing data density using colors** ✓
 - c) Combining datasets
 - d) Showing detailed transactions
54. A TreeMap is used to:
- a) Create a flowchart
 - b) **Show hierarchical data using nested rectangles** ✓
 - c) Compare trends over time
 - d) Perform calculations

55. The Color shelf in Tableau is used for:
- a) Data blending
 - b) **Assigning colors based on categories or measures** ✓
 - c) Changing the background color
 - d) Exporting reports
56. What does a Dual-Axis chart in Tableau do?
- a) **Combines two measures in a single visualization for comparison** ✓
 - b) Filters data
 - c) Creates histograms
 - d) Modifies dimensions
57. Tableau Public is:
- a) A paid version
 - b) **A free version of Tableau that allows publishing to the web** ✓
 - c) Used only by enterprises
 - d) Only for offline analysis
58. The default aggregation for Measures in Tableau is:
- a) Count
 - b) Average
 - c) **Sum** ✓
 - d) Median
59. In Tableau, a Story is:
- a) A type of chart
 - b) **A sequence of visualizations that convey insights** ✓
 - c) A data warehouse
 - d) A filter type
60. Tableau Server is used for:
- a) **Collaborating and sharing Tableau dashboards within an organization** ✓
 - b) Creating calculated fields
 - c) Storing raw data
 - d) Performing data cleansing
-
